**DETAILED ACTION**

***Response to Amendment***

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dorner et al., U. S. Patent 449,424 in view of Lindheim, U. S. Patent 1,245,475. Dorner teaches a novelty hat in the shape of connecting horseshoes, wherein the horseshoes resemble the Greek letter  $\Omega$ . Dorner does not teach the hat in the shape of the letter "M". Lindheim teaches a plurality of characters 2 in the shape of the letter of the alphabet (2). Specifically, Lindheim teaches the letter "M" having a "v" shaped central portion and side legs extending down from the upper distal end of the central portion, whereby the leg extend below the lower portion of the "v". It would have been obvious to one having ordinary skill in the art at the time this invention was made to construct the character or letter of the device taught by Dorner in the shape "M" taught by Lindheim to provide a means of displaying the letter "M" on the head.

In addition, Quigley teaches a headgear made of resilient foam polyurethane material. It would have been obvious to one having ordinary skill in the art at the time

this invention was made to construct the hat taught by Dorner and Lindheim of a foam material as taught by Quigley to provide a resilient means to retain the hat on wearer head.

With respect to claims 5, 8, and 9, Dorner teaches square cross-section as seen in figure 1-3.

***Response to Arguments***

2. Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.
